In the drilling for oil and gas it is common to make wells, that is boreholes extending into subterranean formations from the surface, using a drilling rig. The rig is employed to support a drill bit on the end of a drill string. The drill bit is rotatably driven by a power tong which grips the drill string, located typically in the derrick of the rig. This sequence of actions is performed until the desired depth is reached, at which point a casing, pipe or other housing is placed over the borehole.
